Standard-Definition Satellite System On A Chip

Product Code: **BCM7301**

Broadcom's BCM7301 is a highly integrated System on a Chip for satellite Set-top Boxes.

Broadcom's BCM7301 is a highly integrated and cost-effective satellite Set-top Box System on a Chip for single high-definition MPEG-4 decode and standard-definition display with USB-PVR and advanced connectivity features that supports Digital Living Network Alliance (DLNA). It combines a satellite front-end with an integrated tuner and data transport processor, a high-quality video processing engine, four video DACs and a pair of high-fidelity audio DACs.

FEATURES

- Advance security engine and DVB-CSA3 descrambler system that meets all major Conditional Access requirements
- High-performance 2D graphics engine
